## Lecture description:

Intensive 1 day hands-on about Dental Photography.

Modern digital cameras are able to capture great details, but we have to learn how to use them properly in the dental office.

On this lecture you can learn a coordinated approach to capture the best possible photographs with your camera and flashes for documentation and shade communication.

I will help how to choose, and how to use your camera gear for dental photography.

I will show common mistakes, and how to avoid them.

Even if you are new or experienced to photography, this lecture gonna be helpful to step to the next level.

## Learning objectives:

- Camera basics and differences between cropped and full frame formats
- Which gear is the best for you
- Calibration of your digital tools
- Use the different type of illuminations: point, diffused, reflected and polarised
- Shade analysis through photographs for ceramic or composite layering
- Documentation, communication with photographs
- Intra-oral, object and portrait photography
