Understanding tooth morphology is paramount to success, and wax-ups are a fundamental tool for diagnosis and communication. Wax-up is also great for improving your shape, morphology, and texture skills. If you learn how to create a beautiful tooth with wax, you can complete the same with other materials.

Objectives:

1. Select the right armamentarium, including the type of wax and tools.
2. Basic principles for a nice, natural smile
3. Anatomy and morphology of the upper central, lateral, canine
4. How to alter the shape and the appearance of the teeth with the line angles

Who should attend:

For everyone who loves nature and wants to learn how to imitate it, and for everyone who makes anterior direct or indirect restorations.

Szabi Hant MDT

What to use (recommendations):

1. Electric wax knives - provided on the course!

Ideally, two knives, one thinner and one medium size probe.

The thinner for fine details, the thicker for the quicker build up.

Renfert Waxlectric

Light I - 2156 0000 (220V)

Light II - 2157 0000 (220V)

2. Wax carving tools:

Renfert Ergo wax tools 2 and 3

2 - 1034 2002

3 - 1034 2003

3. Thin scalpel - provided on the course!

4. Renfert Instrument set Standard (No. 1151 0000)

Plus the Renfert Ergo wax tool 2

One day Wax-up course agenda.

8.30	Lecture about the basics
